

## **THE REASON FOR USING YOUR PERSONAL ACCOUNT AT ZARDOZ WHEN LOGIN INTO THE SCOUT-O3 PAGES:**

At NILU we strongly recommend all zardozi users to have a personal account at our machine. When you are involved in projects like SCOUT-O3, VINTERSOL etc, you will be asked for your password to see protected data files and other secure pages. The use of this personal login profile at all projects makes things easy for the user, who only needs to remember one login name and password.

Once signed the protocol for a new project, we will give the user the access to this specific project folder.

Having a personal account you can create your own folders, store files, and use the different graphical plotting routines created at NILU (see latest issue of NADIR NEWS).

## **WHY IS THE PIP LOGIN DIFFERENT FROM THE DATABASE LOGIN?**

The pip pages for SCOUT-O3 is a general workbook for the project. Here all users involved can upload project documents, pictures, important information etc. This is a common site and therefore we use a common login here.
